DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/25/07 has been entered.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11, 12, 14-18, 21, and 25-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Olsen (U.S. Pat. No. 3,655,145).

Olsen discloses a magnetic tape cartridge comprising a generally rectangular cartridge case in which a single reel wound with a magnetic tape is rotatably housed. A drawing-out member 74 is provided at one end of the magnetic tape. A magnetic tape drawing-out port 56 is provided on a side surface of the cartridge case at a position

apart from a corner of said cartridge case. The magnetic tape drawing-out port 56 is provided between a position corresponding to a screw hole 32 (bottom right of cartridge in Fig. 1) used for assembling upper and lower cases 16, 18 provided in the corner of said cartridge case and a position corresponding to a reference hole 68 in the vicinity of a central portion of the cartridge case provided in an outer periphery of a surface of the cartridge case that is perpendicular to a rotary axis of the reel. The magnetic tape is capable of being drawn out of the magnetic tape drawing out port by the drawing-out member 74. The cartridge has a second reference hole (hole 32 receiving screw 34 in the upper left corner of the cartridge in Fig. 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Olsen (U.S. Pat. No. 3,655,145).

Olsen is described above.

Olsen does not explicitly state that the central portion of the tape drawing-out port is located at a position apart from the corner of said cartridge case by a distance equivalent to approximately one quarter of an edge length of the side of the cartridge.

Art Unit: 3654

It would have been obvious to one having ordinary skill in the art at the time the invention was made to locate the tape drawing-out port 56 at a position apart from the corner of said cartridge case so that its central portion is approximately one quarter of the edge length of the side of the cartridge from the corner since Olsen shows the port in that location and it would have been clear that locating the port at that location would have been fully capable of operating as desired.

Response to Arguments

Applicants' arguments filed 10/25/07 have been fully considered but they are not persuasive.

Applicants argue that Olsen does not disclose the claimed reference hole that is not provided in any of the four corners of the cartridge case. However, reference hole 68 is not located any of the corners of the cartridge case.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kaku et al (U.S. Pat. No. 5,702,062) is cited to further show a tape cartridge having plural reference holes.
